**TestSight Developer License Redemption Guide**

This document will guide users through the step by step process of license redemption in order to activate the TestSight Developer software provided by Demille Research Inc.

In order to activate the TestSight Developer software, a serial number must be obtained by emailing the TestSight Registration form (.tsr file) to Agilent's assigned TestSight registration team.

1) Once the TestSight Developer Software has been installed, run TestSight Developer.
2) Once the software is opened you should see a popup window as shown below:

3) To proceed with the registration you can choose to click on the "Register" button on the popup window above, or you can click on the "OK" button and go to Help > About TestSight Developer

Clicking on the "About TestSight Developer" option will bring you back to the Popup window shown in Step 2.
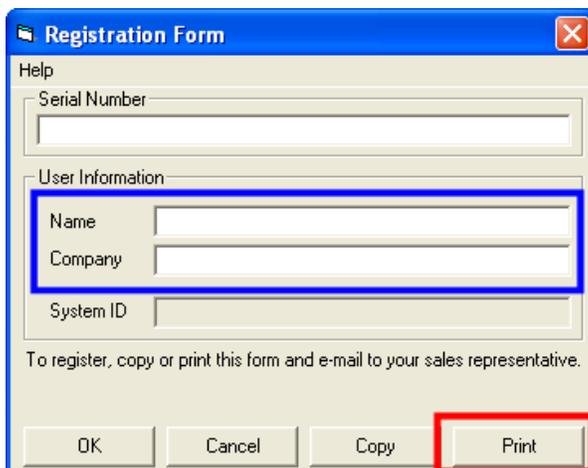

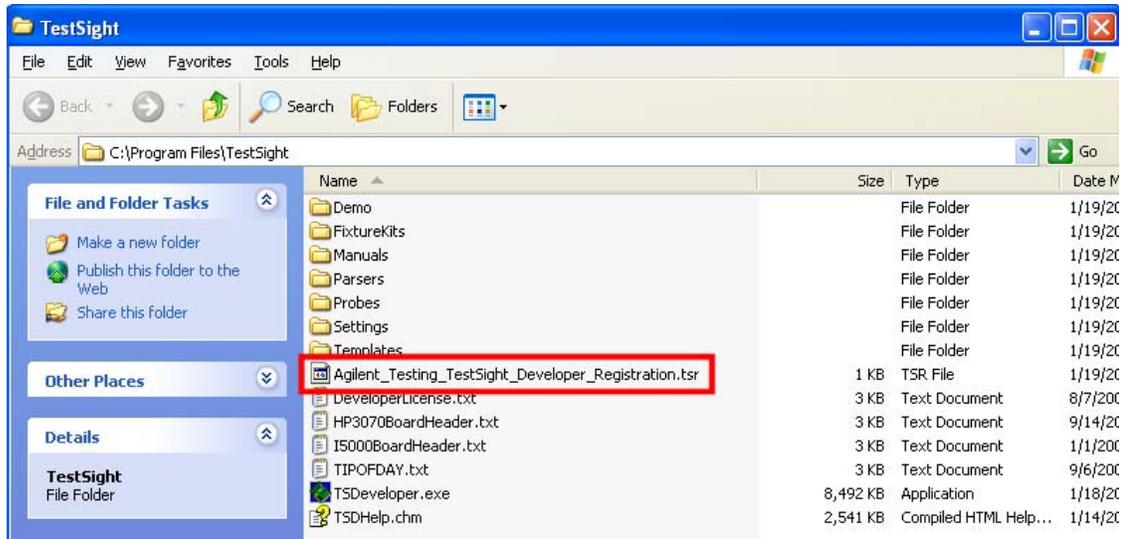

4) At the popup window, click on the "Register" button

5) Once the "Register" button is clicked a "Registration Form" window will appear as shown in the screenshot below.

6) Proceed to fill in the requested information at the "Name" and "Company" fields (highlighted in BLUE below), the other fields are to be left empty. Once the information has been filled, click on the "Print" button

7) Next, proceed to the folder **C:\Program Files\TestSight** and you should be able to locate a file named "<Company>_<Name>_TestSight_Developer_Registration.tsr". Refer to the example below:

8) Attach the mentioned TSR file above and send it over to Agilent's support personnel. A registration process will take place from here to generate a license file that contains the serial number needed for the license registration.

9) Once the license has been generated (typically in 1 to 2 days), the license file will be sent back to you via email. Do note that this license file has the same name as the TSR file that you sent over.

10) To complete your license registration, simply copy and paste the file back to the folder: **C:\Program Files\TestSight**. This will prompt you to replace the existing file within the folder, click on "Yes"

11) Now that the registration is complete, all you need to do is startup the TestSight Developer software and it will be activated.

NOTE: DO NOT RENAME THE TSR FILE IN ANY CASE OR THE LICENSE REGISTRATION WILL BECOME INVALID
