

README for Contributed Library for LC/MSD ChemStation

Purpose

The contents of this library are intended to help users of the ChemStation software to develop and customize their installations to their specific needs and therefore get the best out of their investment.

The contents of the library come from both Agilent internal and user contributed sources and all contributions are welcome. Each contribution is checked for functionality but does not necessarily go through any formal testing procedure. Therefore Agilent Technologies DOES NOT OFFICIALLY SUPPORT the operation of the contributions in any way whatsoever. Defects found in the software should be directed to:

LCMS Marketing
Agilent Technologies
5301 Stevens Creek Blvd.
Santa Clara, CA 95051
USA

Attention: LC/MS Software Product Manager

Fax (408)553-3165

Prerequisites

You will need a PC with the ChemStation software in its supported software environment. Specific contributions may need other requirements that will be detailed in the directory holding the contribution.

Contents

Each contribution is classified as a MACRO or UTILITY contribution and is held in its own directory under either \MACROS or \UTILITY, as appropriate. The utilities are programs and the macros are ChemStation macros or additional commands or functions provided as dynamic link libraries.

The individual contributions are held in numbered directories, for example ...

\MACROS\1 for macro contribution 1

\MACROS\2 for macro contribution 2

and an index file (INDEX.DOC) is held in the MACROS and UTILITY directories.

Each contribution may be further structured for clarity but all have a README.TXT file describing their purpose, prerequisites and operation.

All the software included in the library is in the public domain and hence referred to as 'freeware'.

We hope the library helps you and would be pleased to hear from you with suggestions for improvements and with contributions.

Agilent LCMS Marketing, Santa Clara, CA 95051, USA
