
HP 4396A Option 010 Impedance Measurement Function and HP 43961A RF Impedance Test Kit

Technical Data and Ordering Information

**For convenient RF impedance measurements
100 kHz-1.8 GHz**

HP 4396A with Option 010 and HP 43961A RF Impedance Test Kit.
The HP 16192A SMD test fixture is shown mounted on the HP 43961A.

Introduction

The HP 4396A combination RF network and spectrum analyzer now can perform direct impedance measurements by the addition of Option 010 and the HP 43961A RF impedance test kit. The kit enables the use of many test fixtures, simplifying impedance testing.

Option 010 Impedance Measurement Function

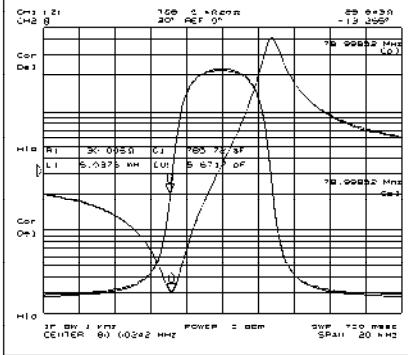

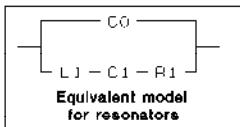

Option 010 adds the impedance measurement function to the HP 4396A. Covering from 100 kHz to 1.8 GHz, impedance parameters $|Z|$, θ , C , L , Q , D , and more are measured and displayed directly on the CRT. Basic accuracy of 3%, fast impedance measurements and convenient display of parameters improve measurement quality and speed analysis of components and circuit elements.

HP 43961A RF Impedance Test Kit

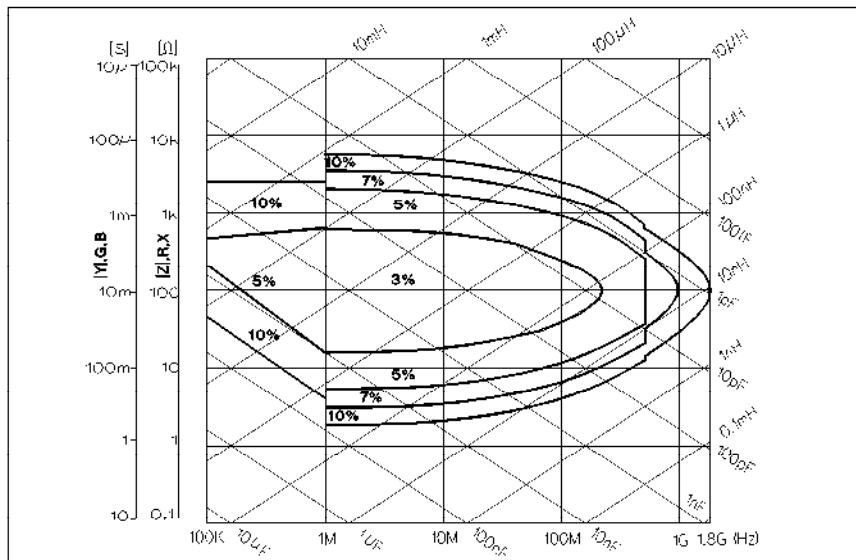

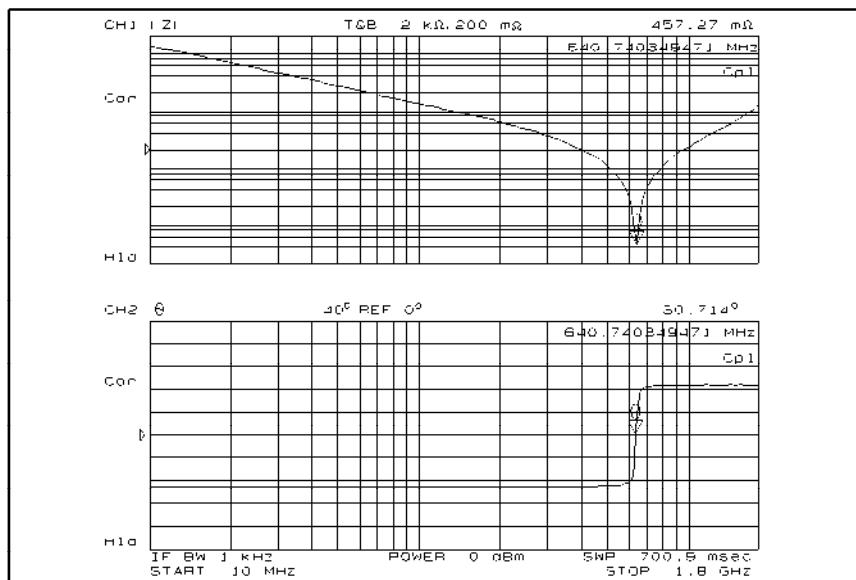

HP 43961A RF Impedance Test Kit is designed for the HP 4396A and is required to utilize the features of Option 010. An APC-7® connector is mounted on this kit for easy connection to an appropriate impedance test fixture. (See Ordering Information for available HP test fixtures.)

Direct Display of Impedance Data

The impedance measurement firmware provides powerful display choices, allowing direct parameter versus frequency display. See capacitance, inductance impedance magnitude and phase, and more, as a function of frequency. In addition, a lumped equivalent circuit function (HP 4194A circuit models) aids circuit modeling and simulation.

The equivalent circuit function calculates equivalent circuit parameters and simulates your devices. A resonator example is shown.
