

Xinger®

Ultra Small Low Profile 0603 Balun 50Ω to 150Ω Balanced

Description

The BD4859L50150A00 is an ultra-small low profile balanced to unbalanced transformer designed for differential inputs and output locations on next generation wireless chipsets in an easy to use surface mount package covering 802.11a Uni-Band II and Uni-Band III and the Japanese ISM band (4.9GHz). The BD4859L50150A00 is ideal for high volume manufacturing and is higher performance than traditional ceramic baluns. The BD4859L50150A00 has an unbalanced port impedance of 50Ω and a 150Ω balanced port impedance. This transformation enables single ended signals to be applied to differential ports on modern integrated chipsets. The output ports have equal amplitude (-3dB) with 180 degree phase differential. The BD4859L50150A00 is available on tape and reel for pick and place high volume manufacturing.

Detailed Electrical Specifications: Specifications subject to change without notice.

Features:	Parameter	ROOM (25°C)			Unit
		Min.	Typ.	Max	
<ul style="list-style-type: none"> • 4800 – 5900 MHz • 0.7mm Height Profile • 50 Ohm to 2 x 75 Ohm • Covers 802.11a Uni-Band II & III • Low Insertion Loss • Input to Output DC Isolation • Surface Mountable • Tape & Reel • Non-conductive Surface • RoHS Compliant 	Frequency	4800		5900	MHz
	Unbalanced Port Impedance		50		Ω
	Balanced Port Impedance		150		Ω
	Return Loss	9.5	13		dB
	Insertion Loss*		0.8	1.1	dB
	Amplitude Balance		0.6	1.2	dB
	Phase Balance		2	8	Degrees
	CMRR		29		dB
	Power Handling			0.5	Watts
	Thermal Resistance			TBD	°C / Watt
	Operating Temperature	-55		+85	°C

* Insertion Loss stated at room temperature (Insertion Loss is approximately 0.1 dB higher at +85 °C)

Pin	Designation
1	Unbalanced Port
2	GND
3	Balanced Port 1
4	Balanced Port 2
5	GND
6	NC

Tolerances are Non-Cumulative

Dimensions are in Inches [Millimeters]
Mechanical Outline

Typical Broadband Performance: 500 MHz. to 8000 MHz.

Typical Performance: 4700 MHz. to 6000 MHz.

Mounting Configuration:

In order for Xinger surface mount components to work optimally, the proper impedance transmission lines must be used to connect to the RF ports. If this condition is not satisfied, insertion loss, Isolation and VSWR may not meet published specifications.

All of the Xinger components are constructed from ceramic filled PTFE composites which possess excellent electrical and mechanical stability having X and Y thermal coefficient of expansion (CTE) of 17 ppm/°C.

An example of the PCB footprint used in the testing of these parts is shown below. An example of a DC-biased footprint is also shown below. In specific designs, the transmission line widths need to be adjusted to the unique dielectric coefficients and thicknesses as well as varying pick and place equipment tolerances.

No Bias Footprint

DC Bias Footprint

Packaging and Ordering Information

Parts are available in reel and are packaged per EIA 481-2. Parts are oriented in tape and reel as shown below. Minimum order quantities are 4000 per reel. See Model Numbers below for further ordering information.

BD 2425 J 50 100 A 00
