

REACH Certification of Compliance for Xinger[®]-brand products

This document certifies that all products produced under the Xinger-brand product line are compliant with REACH legislation and can be accurately described in the following manners:

- Are categorized as articles under current REACH legislation.
- Are not intended to release substances during normal or reasonably foreseeable conditions of use.
- Do not contain any of the 151 SVHC (Substances of Very High Concern) described by the ECHA (European Chemicals Agency) on December 16, 2013 at levels surpassing the threshold of 0.1% by weight.

Anaren works actively with suppliers to ensure continued compliance with REACH legislation. Furthermore, Anaren remains vigilant in monitoring the SVHC candidate list for new additions. Should a newly added SVHC candidate be found in any Xinger-brand products, Anaren Microwave will work diligently to move this product to immediate compliance.

Lastly, a brief clarification is needed regarding the presence of Diboron Trioxide (B_2O_3). This material is on the SVHC candidate list and is also present in some of the Xinger-brand products. However, in each case in which Diboron Trioxide is present in a Xinger-brand product, it is as a component of glass. Diboron Trioxide is often created as part of the glass manufacturing process, but is neither an input into the glass manufacturing process, nor is there any significant risk of Diboron Trioxide separating from the glass, once manufactured. Thus, the presence of Diboron Trioxide in glass does not represent an SVHC and is not a violation of REACH legislation.

I hereby certify that the information provided in this form is accurate and complete. I further certify that I or another representative of our Company will post notification through our distribution partners and/or our corporate website within ten (10) business days of determining that any information is no longer accurate with regard to the described part(s).
