Giga-tronics achieves continuing AS9100 Certification, upgraded for 2012

SAN RAMON, Calif.—February 8, 2012 -- Giga-tronics (NASDAQ:GIGA) announced that Giga-tronics has successfully renewed its AS9100 certification, an upgrade of our ISO 9001 Quality Management System. Giga-tronics is now certified as fully capable to be a provider of products and services (including deliverable hardware) that meet the most stringent aerospace and defense industry quality system requirements.

AS9100 is the Quality Management System standard for the aerospace industry. The standard includes all ISO 9001:2000 requirements as a base, with numerous enhancements that address aerospace-specific requirements:

- Configuration management
- Risk management
- Quality requirements flow-down to supply chain
- First article inspection
- Significant requirements have been added to design/development, procurement and supplier management, and monitoring/measurement activities

“With AS9100 certification, Giga-tronics proves its manufacturing focus on delivering high performance, high reliability solutions to its customer,” said John Regazzi, CEO. “As an American company with its product made in the USA, we are proud to have demonstrated our commitment to quality.”

The standard was originally released in 1999 as a result of the work of major US aerospace manufacturers and has since been adopted internationally.

About Giga-tronics:

Founded in 1980, Giga-tronics Incorporated (Nasdaq "GIGA"), headquartered in San Ramon, California, is a leading engineering-and-design manufacturer of best-in-class RF and microwave signal generators, microwave power amplifiers, USB power sensors, microwave power meters and tailored switching solutions. R&D, production and calibration managers, scientists, engineers and technicians, around the world, use Giga-tronics test equipment and achieve lower cost, higher productivity and greater ease of use in many applications: ATE systems, aerospace & defense, communications and general component test.
