

HIGH SNR, HIGH AOP ANALOG BOTTOM PORT SISONIC™ MICROPHONE

The SPH18C3LM4H-1 is a high Signal-to-Noise Ratio (SNR), high Acoustic Overload Point (AOP), bottom port silicon microphone. Using Knowles' proven high performance SiSonic™ MEMS technology, the SPH18C3LM4H-1 consists of an acoustic sensor, a low noise input buffer, and a differential output amplifier supporting optional single ended mode. This microphone's high SNR enables enhanced consumer experience with Transparency Mode & Active Noise Cancellation on Ear Products. Its high SNR & AOP provide high dynamic range for Mobile & variety of IoT products in a small form factor. The microphone's low phase distortion lends to superior algorithm performance. Its differential mode configuration improves noise immunity to power supply variations, allowing extension of microphone PCB traces.

NOTES:

Bypass capacitors should be placed next to each Vdd pin for best performance. All Ground pins must be connected to ground. If necessary to improve RF performance, optional series components (resistors, ferrites, etc.) should be placed closest to the microphone pads. Capacitors near the microphone should not contain Class 2 dielectrics due to their piezoelectric effect. Follow the codec manufacturer's recommendations for circuitry and layout.
