LEAD-FREE / RoHS-COMPLIANT

SURFACE-MOUNT BROADBAND BALUN BAL-0009SMG

Features

- 500 kHz to 9 GHz 1:2 Balun (Balanced to Unbalanced Transformer)
- Transforms 50 Ω Input to 100 Ω Differential (50 Ohm Single) Output
- Tuned for Optimal Phase/Amplitude Balance
- Applications: Analog to Digital Converters, Balanced Receivers, Baseband Digital Modulation, Signal Integrity
- BAL-0009SMG.s3p

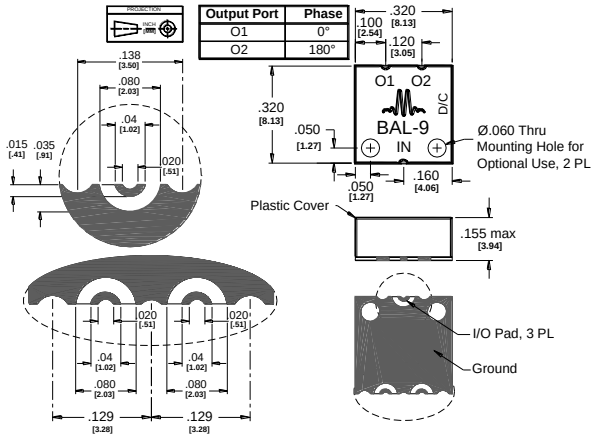
Electrical Specifications - Specifications guaranteed from -55 to +100°C, measured in a 50Ω system.

Parameter	Frequency Range	Min	Typ	Max
Insertion Loss as a mode converter (dB)	500 kHz to 9 GHz		4.5	6.5
Nominal Phase Shift (Degrees)			180	
Amplitude Balance (dB)			0.6	1.6
Phase Balance (Degrees)			5	12
Common Mode Rejection (dB)		18	26	
Isolation (dB)			8	
VSWR			1.5	
Total Input Power (W)				1
Risetime /Falltime (ps)[1]			16	

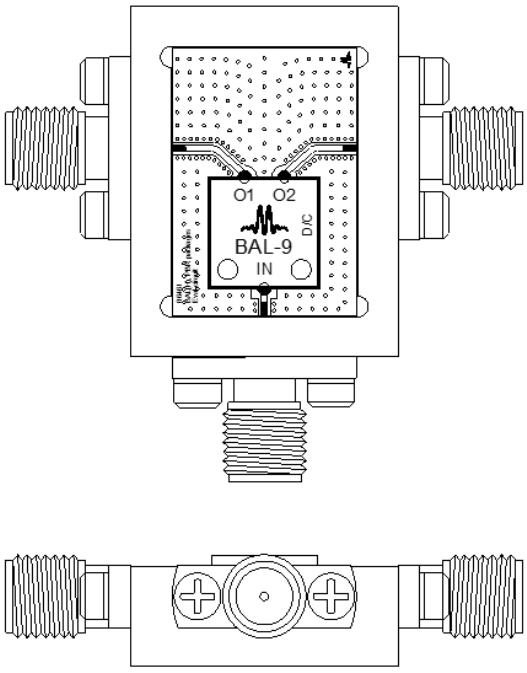
[1]Specified as 90%/10%. Calculated from $\tau_{balun}^2 = (\tau_{out}^2 - \tau_{in}^2)$

Model Number	Description
BAL-0009SMG	500 kHz to 9 GHz Balun, Surface Mount, LEAD-FREE/RoHS COMPLIANT
EVAL-BAL-0009	Connectorized Evaluation Fixture, LEAD-FREE/RoHS COMPLIANT

215 Vineyard Court, Morgan Hill, CA 95037 | Ph: 408.778.4200 | Fax 408.778.4300 | info@markimicrowave.com



Substrate material is 8-mil thick Rogers 4003, 1 Oz Electrodeposited Cu. I/O Pads & Ground Plane Finish is ENIG: Gold 2 to 8 µ-inches, over Nickel, 100-200 µ-inches, over Cu. See BALSMG-PCB for suggested PCB layout.



Evaluation Board outline

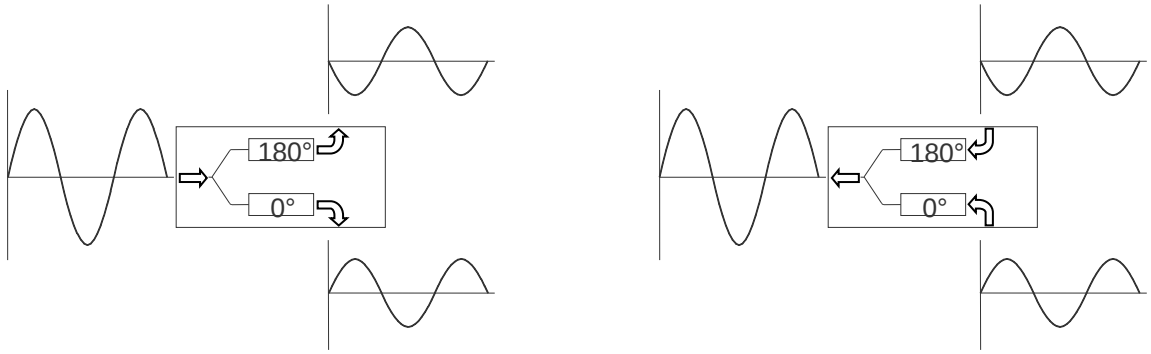
Block Diagram



Single ended to differential **Differential to single ended**

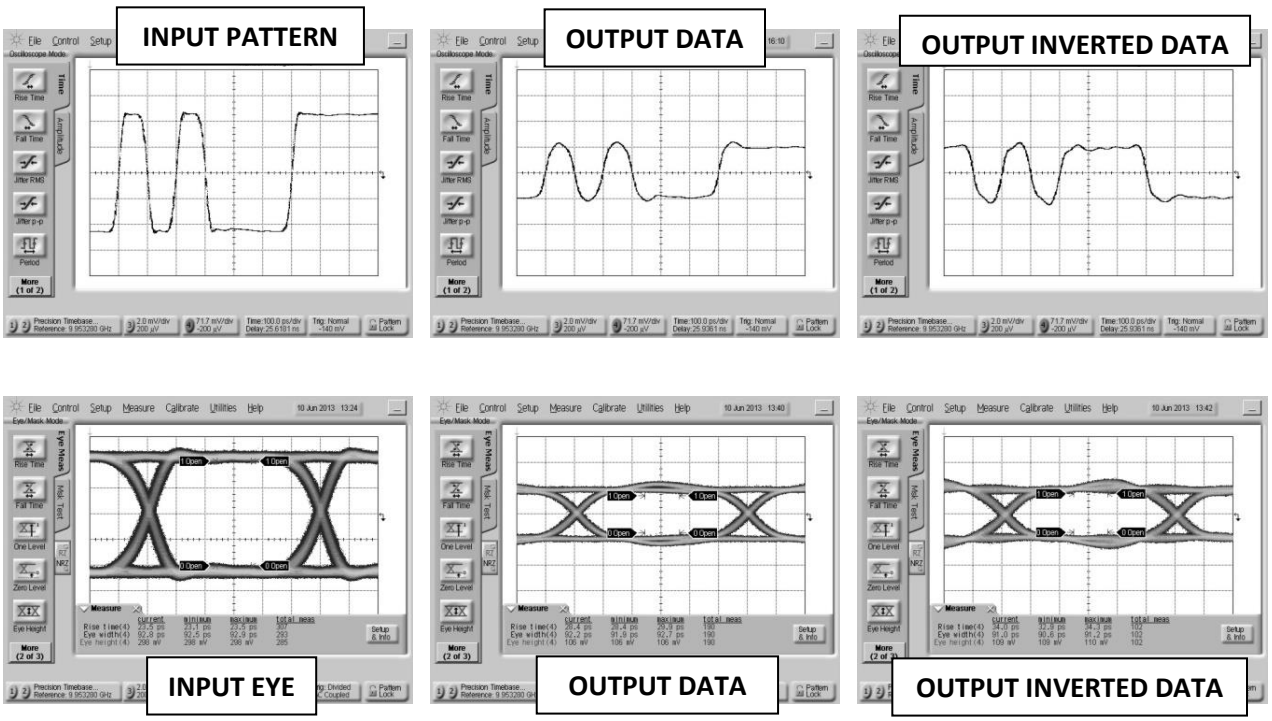


Fig. 1. Oscilloscope measurements of the BAL-0009SMG with a 10 Gb/s PRBS pattern. Bit pattern is measured with a 2^7-1 PRBS input demonstrating extremely good pulse fidelity for both inverted and non-inverted output. Eye diagrams are taken with a 2^{31}-1 PRBS input demonstrating minimal eye distortion/closure afforded by the extremely low frequency operation of the balun (<500 kHz).

Mixed Mode Scattering Parameters

Mixed mode scattering parameters are used to characterize differential circuits. For baluns, this means that the 0° and 180° ports become a single 100Ω differential port and the common port remains the same 50Ω common port. The two-port s-parameters of the balun are then characterized based on differential (d), common mode (c), or single-ended (s) signals. For example: Sds12 is the differential output response given a single ended input.

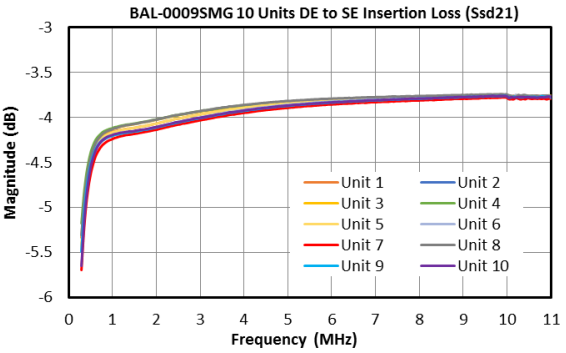

Fig. 9. Low frequency Insertion loss as a mode converter across 10 units

Typical Performance Scattering Parameters

Three port scattering parameters measured as three single-ended 50Ω ports showing relationship between any two ports. For example: S21 and S31, often referred to as insertion loss of a balun, is the output response on ports 2 and 3 with an input stimulus on port 1.

DC Interface

Port	Description	DC Interface Schematic
Common Port / In (Unbalanced)	The common port is DC short to ground.	Out 1 / 0° Port (Balanced)	The 0° port is DC short to ground.	Out 2 / 180° Port (Balanced)	The 180° port is DC short to ground.	
Absolute Maximum Ratings	
Parameter	**Maximum Rating**
DC Current	1A
RF Power Handling	+33 dBm
Operating Temperature	-55ºC to +100ºC
Storage Temperature	-65ºC to +125ºC

DATASHEET NOTES:

1. Specified as 90%/10%. Calculated from $\tau_{balun}^2 = (\tau_{out}^2 - \tau_{in}^2)$
2. Sdd22: differential return loss of the differential port driven with a differential signal
   Sdc22: differential return loss of the differential port driven with a common signal
   Sds21: insertion loss from a single ended input to a differential output
   Scc22: common mode return loss of the differential port driven with a common signal
   Scd22: common mode return loss of the differential port driven with a differential signal
   Scs21: insertion loss from a single ended input to a common output
   Sss11: single ended return loss
   Ssd12: insertion loss from a differential signal to single ended output
   Ssc12: insertion loss from a common signal to single ended output

Revision History

Revision code	Revision Date	Comment
-	February 2013	Datasheet initial Release
A	March 2019	Evaluation board outline added
B	October 2019	Mixed Mode Scattering Parameters added
C	April 2020	Unit Spread Graphs Added
D	July 2020	Update Specs table & low frequency Ssd21 plot added
E	October 2020	Update Specs table
F	May 2022	Max DC Current update, Ground Plane Finish update
