

MT3H-0113LS

GaAs MMIC High Dynamic Range Mixer

DEVICE OVERVIEW

General Description

The MT3H-0113L is a triple balanced passive diode mixer offering high dynamic range, low conversion loss, and excellent repeatability. As with all T3 mixers, this mixer offers unparalleled nonlinear performance in terms of IIP3, P1dB, and spurious performance with a flexible LO drive requirement from +7 dBm to +15 dBm. RF, LO, and IF ports are all operated single ended due to integrated baluns. The MT3H-0113L is available as a wire bondable chip or an SMA connectorized package. The MT3H-0113L is a superior alternative to Marki Microwave carrier and packaged T3 mixers. If >+16dBm LO power is available, the higher barrier MT3H-0113H is recommended.

Features

- Broadband, Overlapping RF, LO and IF
- RoHS Compliant
- Square-Wave LO delivers Industry-Leading Spurious, IP3, and P1dB Performance

Applications

N/A

Port Configuration and Functions

Port Diagram

Port Functions

Configuration A

Port	Function	Description	Equivalent Circuit for Package
Port 1	LO	Port 1 is DC short and AC matched to 50 Ω from 0.8 to 13 GHz. Blocking capacitor is optional.	 P1
Port 2	IF	Port 2 is DC open. Blocking capacitor is optional.	 P2
Port 3	RF	Port 3 is DC short and AC matched to 50 Ω from 0.8 to 13 GHz. Blocking capacitor is optional.	 P3

Configuration B

Port	Function	Description	Equivalent Circuit for Package
Port 1	RF	Port 1 is DC short and AC matched to 50 Ω from 0.8 to 13 GHz. Blocking capacitor is optional.	
Port 2	IF	Port 2 is DC open. Blocking capacitor is optional.	
Port 3	LO	Port 3 is DC short and AC matched to 50 Ω from 0.8 to 13 GHz. Blocking capacitor is optional.

Parameter	Details	Rating
Dimensions	-	14.22x13.21mm

Recommended Operating Conditions

Parameter	Min	Nominal	Max	Unit
LO Input Power	7	-	15	dBm

Electrical Specifications

Specifications guaranteed from -55 to +100°C, measured in a 50Ω system. All bare die are 100% DC tested and 100% visually inspected. RF testing is performed on a sample basis to verify conformance to datasheet guaranteed specifications. Consult factory for more information.

Parameter	Port Configuration	Test Conditions	Min	Typ	Max	Unit
RF Frequency Range	-	-	1.5	-	13	GHz
LO Frequency Range	-	-	1.5	-	13	GHz
Conversion Loss ¹	-	LO/RF=1.5-13 GHz IF=0.8-1 GHz LO drive level=15 dBm	-	8	11	dB
Conversion Loss ²	-	LO/RF=1.5-13 GHz IF=1-8.85 GHz LO drive level=15 dBm	-	11.5	-	dB
Isolation, LO to RF	-	-	-	43	-	dB
Input IP3 ³	A	LO/RF=1.5-13 GHz IF=0.8-8.5 GHz LO drive level=7-15 dBm	-	20	-	dBm
Input IP3 ⁴	B	LO/RF=1.5-13 GHz IF=0.8-8.5 GHz LO drive level=7-15 dBm	-	22	-	dBm
IF Frequency Range	-	-	0.8	-	8.5	GHz

[1][2] Measured Conversion Loss measured at 1 GHz fixed IF.

[3][4] IP3 depends on LO drive conditions, see plots for more details.

Spur Table

Downconversion Spurious Suppression

Spurious data is taken by selecting RF and LO frequencies (+mLO+nRF) within the RF/LO bands, to create a spurious output within the IF band. The mixer is swept across the full spurious band and the mean is calculated. The numbers shown in the table below are for a -10 dBm RF input. Spurious suppression is scaled for different RF power levels by (n-1), where "n" is the RF spur order. For example, the 2RFx2LO spur is 57 dBc for the A configuration for a -10 dBm input, so a -20 dBm RF input creates a spur that is (2-1) x (-10 dB) dB lower, or 67 dBc.

Typical Downconversion Spurious Suppression (dBc): A Configuration (B Configuration), Sine Wave LO ⁶

-10 dBm RF Input	0xLO	1xLO	2xLO	3xLO	4xLO	5xLO
1xRF	27 (33)	Reference	32 (40)	15 (15)	31 (40)	30 (33)
2xRF	59 (56)	65 (60)	57 (57)	62 (55)	59 (62)	62 (53)
3xRF	96 (91)	72 (73)	85 (86)	65 (67)	84 (89)	122 (122)
4xRF	119 (114)	138 (138)	114 (116)	115 (112)	109 (108)	113 (110)
5xRF	143 (126)	130 (136)	134 (139)	129 (132)	136 (139)	119 (120)

Typical Downconversion Spurious Suppression (dBc): A Configuration (B Configuration), Square Wave LO ⁶

-10 dBm RF Input	0xLO	1xLO	2xLO	3xLO	4xLO	5xLO
1xRF	26 (29)	Reference	25 (25)	13 (11)	22 (24)	21 (19)
2xRF	61 (62)	65 (59)	60 (60)	64 (60)	61 (65)	67 (62)
3xRF	94 (100)	75 (78)	87 (92)	71 (73)	85 (90)	125 (122)
4xRF	124 (130)	116 (119)	117 (120)	119 (115)	115 (116)	116 (115)
5xRF	144 (151)	134 (141)	138 (138)	135 (137)	139 (142)	128 (132)

Upconversion Spurious Suppression

Spurious data is taken by mixing an input within the IF band, with LO frequencies (+mLO+nIF), to create a spurious output within the RF output band. The mixer is swept across the full spurious output band and the mean is calculated. The numbers shown in the table below are for a -10 dBm IF input. Spurious suppression is scaled for different IF input power levels by (n-1), where "n" is the IF spur order. For example, the 2IFx1LO spur is typically 62 dBc for the A configuration for a -10 dBm input, so a -20 dBm IF input creates a spur that is (2-1) x (-10 dB) dB lower, or 72 dBc.

Typical Upconversion Spurious Suppression (dBc): A Configuration (B Configuration), Sine Wave LO ⁶

-10 dBm IF Input	0xLO	1xLO	2xLO	3xLO	4xLO	5xLO

Application Information

Configuration A

Configuration B

Configuration A/B refer to the same part number (MT3H-0113L) used in one of two different ways for optimal spurious performance. For the lowest conversion loss, use the mixer in Configuration A (port 1 as the LO input, port 3 as the RF input or output). If you need to use a lower LO drive, use the mixer in Configuration B (port 1 as the RF input or output, port 3 as the LO input). For optimal spurious suppression, experimentation or simulation is required to choose between Configuration A and B.

GaAs MMIC High Dynamic Range Mixer

Mechanical Data

Outline Drawing

Notes

1. Mixer Conversion Loss Plot IF frequency is 1 GHz unless otherwise specified.
2. Mixer Noise Figure typically measures within 0.5 dB of conversion loss for IF frequencies greater than 5 MHz.
3. Conversion Loss typically degrades less than 0.5 dB at +100°C and improves less than 0.5 dB at -55°C.
4. Unless otherwise specified, data is taken with highside, +15 dBm sine wave LO drive.
5. Square wave LO generated using 2x ADM1-0026PA with +10 dBm input into the first stage. LO Power reported in plots is of the fundamental tone only. Square wave LO power in plots is stepped down using broadband DC-40 GHz attenuators.
6. Specifications are subject to change without notice. Contact Marki Microwave for the most recent specifications and data sheets.
7. Catalog mixer circuits are continually improved. Configuration control requires custom mixer model numbers and specifications.

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.
