EMBARGOED FOR RELEASE JULY 14, 2008

L-3 Delivers Display and Processing Equipment for Apache Aircraft

FARNBOROUGH, England, July 14, 2008 – L-3 Display Systems, a division of L-3 Communications, announced today that it has delivered more than 800 display, video processing and power components to Lockheed Martin for the U.S. Army and other international users in support of the Apache Modernized Target Acquisition and Designation System (M-TADS). The deliveries are part of a multi-year contract that extends an extremely successful, long-term development and production program with Lockheed Martin beginning in 1997.

"L-3 is manufacturing units for M-TADS with the highest resolution production displays currently available in the military avionics market segment," said Bob McGill, president of L-3's Displays Group. "L-3 Display Systems is a leader in providing high-performance display system solutions for demanding environments, and we are honored to continue our relationship with Lockheed Martin and the U.S. Army by providing leading-edge technologies for the AH-64D Apache program."

The M-TADS display is an active matrix LCD-based system that features high brightness and night vision goggle compatibility. The system, which includes associated video processing and power modules, displays high-resolution FLIR video and is the copilot/gunner's primary interface to the Apache's extensive sensor and targeting systems.

L-3 Display Systems, located in Alpharetta, Ga., specializes in the design, development and manufacture of ruggedized display and processing systems for the world's most advanced applications. L-3 Display Systems offers a wide variety of displays and processors to meet a host of system architectures for airborne, shipboard and ground-based applications.
