

Tactical Network ROVER™

Go Beyond Video with L-3's Tactical Network ROVER™

Tactical Network ROVER™

L-3's Tactical Network ROVER™ handheld transceiver provides a multi-megabit, bidirectional data link capability to the most disadvantaged users: dismounted ground combat troops. This low-SWaP digital radio combines video downlink receiver functionality with broadband IP networking capability.

Our Tactical Network ROVER™ leverages the existing ROVER™ communications infrastructure for air-to-ground interoperability and ground-to-air networking within a Net-T network. This kind of network access allows for digital close air support (CAS), ground force position sharing, chat and large file transfer capabilities to provide unprecedented situational awareness to dismounted ground troops.
