Information Assurance Directorate Certificate

The National Security Agency (NSA) certifies the KG-245X Release 3.0 to provide message confidentiality, data integrity, authentication, and access control security services to protect TOP SECRET SCI and below information when used in accordance with appropriate operational security procedures, the security doctrine entitled, "Operational Security Doctrine for the RedEagle™ KG-245X In-Line Network Encryptor (INE) HAIPE Version 3," dated May 2010 (DOC-122-10), and "HAIPE Configuration Guidance Version 3.1," dated 1 December 2009.

NSA does not make, by virtue of this certification, any statement, or other representation regarding the applicability or effectiveness of the KG-245X Release 3.0 within a secure system context. The decision to use the KG-245X Release 3.0 must be made in a total system context employing an Information System Security Engineering process.
