L-3 COMMUNICATIONS' OMNI SECURE TERMINAL RECEIVES NATIONAL SECURITY AGENCY (NSA) CERTIFICATION

-New Generation of Secure Communication Products Certified to Support U.S. Military and Government Agencies-

NEW YORK, NY-June 12, 2002 -- L-3 Communications (NYSE:LLL) announced today that OMNI™, a voice and data security unit manufactured by its Communication Systems-East division, was recently certified by the National Security Agency (NSA) to secure unclassified and up to and including Top Secret communication transmissions for the U.S. military, government agencies and qualified contractors. This certification supports the highest classification of government secure communications. The introduction of OMNI broadens L-3's dominant Secure Terminal Equipment (STE) product line by providing a compatible device that is a portable, low cost replacement solution to the U.S. Government's existing STU-III secure telephones and a variety of link-encryptor and dial-up networking systems in use since the mid 1980's.

"The OMNI product line provides our customers with a single product that supports several critical applications; voice, modem and link encryption," said Gregory B. Roberts, president of L-3 Communication Systems-East. "With thousands of units on order our customers have already demonstrated their support of the OMNI product line. NSA's certification now enables us to meet our commitment to these early adopters and demonstrate in real world situations the flexibility our product line offers."

The OMNI product line provides users with an extremely flexible security solution comprised of three models; OMNI, OMNIxi and OMNIxp. The design of OMNI and OMNIxi support a level of security available only to the U.S. military services and government agencies. The OMNIxp is an exportable model and provides a robust security solution for sensitive-but-unclassified (SBU) communications. All

-more-

OMNI products support secure voice communication when used in conjunction with a standard analog telephone, dial-up networking, email, and data related operations when used with a personal computer or facsimile. In addition, OMNIxi and OMNIxp support secure digital communications for satellite and next generation network applications such as Voice Over IP (VoIP) and high-speed data rates of 2 Mb/s over broadband networks. The performance features of the OMNI security solution are equally matched with a design approach that focuses on a simple and straightforward user interface.
