Ringlight Polarizers & Analyzers

The polarizing effect enhances contrast on highly reflective surfaces for Microscopy and Machine Vision Applications.

Standard Features

- The polarizer/analyzer reduces reflection and glare.
- The A08615, A08632, and A08652 polarizers were designed to easily snap-fit onto the ringlight. The anyalyzer is dropped through the top of the ringlight and positioned on top of the polarizer.
- To prevent the polarizer/analyzer from moving due to vibration, a knurled thumb-screw locks the polarizer assembly into position. In addition, it makes the holder easier to adjust. To further prevent vibration, a set-screw stops the polarizer disk from turning within the assembly. These features are found on polarizer / analyzer model numbers A08615 and A08627.
