

The Luna OBR 4600 offers unbeatable testing and troubleshooting capabilities now at unprecedented measurement speeds.

KEY FEATURES AND PRODUCT HIGHLIGHTS

- Easily locate, identify and troubleshoot macro-bends, splices, connectors and breaks
- Locate Insertion Loss points at every point in the network or assembly – eliminate cut-back
- Look inside components to evaluate each interface for RL and IL
- Measure 30 m with 10 μm resolution in less than 7 seconds
- Continuously measure a 1 m segment at up to 3 Hz
- Test and troubleshoot short-run networks (< 2 km)
- Automate pass/fail verification of fiber assemblies
- Monitor distributed temperature and strain profiles along network or inside a component or module

The Luna **OBR 4600** is part of Luna's award winning Optical Backscatter Reflectometer™ product line. Designed for component and short-run network testing and troubleshooting, the OBR 4600 enables ultra-high resolution reflectometry with backscatter-level sensitivity. With spatial resolution as fine as 10 microns, zero dead-zone, options for integrated temperature and strain sensing and extended device mode, the OBR 4600 offers the ultimate in fiber diagnostics.

MEASUREMENT PERFORMANCE HIGHLIGHTS

- -130 dB sensitivity
- 70 dB dynamic range
- 2 kilometer length range with no dead-zone
- < 0.05 dB insertion loss resolution

PARAMETER		SPECIFICATION		UNITS
Maximum Device Length:				
Standard Mode		30 or 70		meters
Long Range Mode ¹²		2000		meters
Spatial Resolution (two-point)¹:				
		10 μm over 30 meters		
		20 μm over 70 meters		
		1 mm over 2 km		
Dead Zone:				
		Equals 2-pt spatial resolution		
Wavelength Range²:				
		1265-1335 or 1525-1610		nm
Wavelength:				
Resolution (max)		0.02		pm
Accuracy ³		±1.5		pm
Integrated Return Loss Characteristics:				
Dynamic range ⁴		70		dB
Total range		0 to -125		dB
Sensitivity		-130		dB
Resolution ⁵		±0.05		dB
Accuracy ⁵		±0.10		dB
Integrated Insertion Loss Characteristics:				
Dynamic range ⁶		18		dB
Resolution ⁵		±0.05		dB
Accuracy ⁵		±0.10		dB
Group Delay:				
Accuracy		1.0		ps
Distributed Sensing^{7,12,13}:				
Spatial Resolution ⁸		±1.0		cm
Temperature Resolution ⁹		±0.1		C
Strain Resolution ⁹		±1.0		μstrain
Measurement Timing¹⁰		Standard	Fast¹¹	Spot Scan¹¹
5 nm scan time		3	1.6	0.3
Time vs. wavelength range		2.1 s+0.14 s/nm	1.3 s+0.06 s/nm	0.15 s+0.02 s /nm
Long Range (2 km) Scan Time		20		s

Specifications are for single-mode operation.

For multimode operation, specifications are nominal.

1 Over entire length range.

2 Ranges are nominal.

3 Accuracy maintained by an internal NIST-traceable HCN gas cell.

4 For the 2000 m option, return loss dynamic range is 60 dB.

5 With integration width of 0.5 m

6 The insertion loss dynamic range is the one-way loss that can be suffered before the scatter level of standard SMF (~ -100 dB/mm) is lower than the noise floor (~ -118 dB/mm).

7 Distributed sensing uses Rayleigh spectral shift method and is relative to reference scan.

8 Spatial resolutions listed are ideal to get the temperature and strain resolutions listed; they are not minimums or maximums.

9 Temperature and strain resolutions are calculated from spectral shift of Rayleigh scatter using $1 \text{ GHz} = 0.8 \text{ C} = 6.58 \text{ μStrain}$. [Othonos and K. Kalli, Fiber Bragg Gratings (Artech House, Boston, 1999)].

10 Combined scan and analysis time in high-resolution mode. Times are for 30 m scan mode.

11 Times are with laser tuning speed set at 100 nm/s.

12 Extended range mode and distributed sensing are upgrade options

13 Maximum standard sensing length is 70m. Limited sensing is available in extended range mode. Contact your Luna representative for more information.

CLASS 1 LASER PRODUCT

MEASUREMENT TIMING INFORMATION

Time per scan vs. scan wavelength range for 30 m scans in standard operating, fast scanning and continuous spot scanning modes.

Time per scan vs. scan wavelength range for 70 m scans in standard operating, fast scanning and continuous spot scanning modes.

Wavelength Range (nm)	Spot Scan Rate (Hz) 30 m mode	Spot Scan Rate (Hz) 70 m mode
5	3.7	2.9
10	2.7	2.0
20	1.8	1.2
40	0.9	0.6
80	0.5	-

Scan repetition rates at various scan wavelength ranges for continuous spot scanning in 30 m and 70 m modes of operation. Rates are for laser tuning speed set to 100 nm/s.

The Extended Range Interrogation capability is available on the OBR 4600 with purchase of the extended range mode and spot scan mode. To perform strain and temperature measurements, the distributed sensing option is required in addition to the above. This capability extends strain and temperature measurements up to a range of 2 km for applications located in a benign vibration environment.

APPLICATIONS

- Evaluating spools of Fiber Bragg Gratings
- Evaluating large optical networks and devices
- Strain and temperature at a distance

PARAMETER	SPECIFICATION	UNITS
Maximum Range	2,000	meters
Spot Scan Size	80	meters
Maximum Wavelength Range	3.2	nm
Time Per Scan	6.5	seconds
2-pt Spatial Resolution	0.25	mm
Wavelength Accuracy ²	± 30	pm
Strain Range ³	± 1,250	µStrain
Strain Accuracy ⁵	± 25	µStrain
Temperature Range ^{3,4,5}	± 175	°C
Temperature Accuracy ⁵	± 3	°C
Minimum Gage Length ⁶	3	cm
Minimum Sensor Spacing	0.6	mm

- 1 Extended range sensing works best with a low net change in accumulated strain between the box and the sensing region
- 2 Internal calibration through a NIST-traceable HCN gas cell is not available. Wavelength accuracy is limited by the uncorrected accuracy of the laser source.
- 3 Based on maximum wavelength range of 3.2 nm
- 4 Actual temperature range will be limited by the sensing fiber used
- 5 Temperature and strain accuracies are calculated from the wavelength accuracy using the spectral shift of Rayleigh scatter, 1 GHz = 0.8 C = 6.58 µε. [Othonos and K. Kalli, Fiber Bragg Gratings (Artech House, Boston, 1999)]
- 6 Minimum gage length is valid under zero vibration conditions
