Polytec Laser Surface Velocimeter - LSV

Polytec is known throughout the high-tech world for its leadership in the design and manufacture of laser-based measurement instruments.

Polytec's Laser Surface Velocimeter LSV perform highly accurate non-contact speed and length measurements on moving surfaces in industrial production environments. LSV' measure accurately on billets, slabs, plates, tubes, profiles, coils, and almost any other moving materials, including hot metals thus allowing online control of the production process.

The robust and compact sensor head is equipped with a protective housing to perform continuously in harsh environments.

The high degree of innovation of Polytec Laser Measurement Systems is proofed by many national and international awards.
