Polytec Presents the New LSV-2000 Laser Surface Velocimeter

The LSV-2000 is the new compact velocimeter with standstill and direction detection. Thanks to its new design, exceptionally large measuring field depths of +/-70 mm and high speeds of up to +/-7700 m/min are achieved even at short operating distances. With its new velocimeter, Polytec completes its range of sturdy, compact length and speed sensors that are easily integrated into pipe and tube production processes. The tough protective housing offers dependable use even under extreme environmental conditions, for example, at temperatures up to 200 °C. The high accuracy of laser measurement helps customers optimize the dimensional stability of products and therefore improve quality and profit.
